REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: none of the prior art either alone or in combination disclose or teach of the claimed combination of limitations to warrant a rejection under 35 USC 102 or 103.

Specifically, with respect to independent claim 5, none of the prior art alone or in combination disclose or teach of an actuator assembly comprising the claimed comb structure and specifically a hinge connecting the member frame to the actuator support, wherein the hinge includes a first portion electrically connected to the frame comb and a second portion electrically connected to the member teeth, and wherein the first portion is electrically insulated from the second portion.

Specifically, with respect to independent claim 12, none of the prior art alone or in combination disclose or teach of an actuator assembly disposed on an actuator support comprising the claimed comb structure specifically wherein the actuator assembly occupies a first area in a plane defined by the first fulcrum axis and the second fulcrum axis, and wherein the mirror surface occupies a second area at least one fourth the first area.

Specifically, with respect to independent claim 14, none of the prior art alone or in combination disclose or teach of an actuator assembly comprising the claimed comb structure and specifically a hinge formed in the conductive layer and connecting the

member frame to the actuator support, wherein the hinge is thinner than the movable comb in a second direction perpendicular to the first and second axes.

Specifically, with respect to independent claim 15, none of the prior art alone or in combination disclose or teach of an actuator assembly comprising the claimed comb structure and specifically wherein the hinge comprises two electrically conductive portions separated by an electrically insulating portion.

Specifically, with respect to independent claim 23, none of the prior art alone or in combination disclose or teach of an actuator assembly comprising the claimed comb structure and specifically wherein the second comb means includes a plurality of teeth that move with respect to the first comb means, and wherein the teeth are of varying length.

Specifically, with respect to independent claim 26, none of the prior art alone or in combination disclose or teach of an actuator comprising first and second sets of teeth connected to an actuator support and third and fourth sets of teeth connected to an actuated member as claimed, specifically wherein the first and third sets and the second and fourth sets of teeth are arranged interdigitally from at least one perspective, the

teeth of the fourth set of teeth extend in parallel with the teeth of the second set of teeth and wherein the teeth of the first and second sets are not parallel.

Specifically, with respect to independent claim 33, none of the prior art alone or in combination disclose or teach of an actuator comprising first and second sets of interdigitated combs as claimed, specifically wherein the actuated member is adapted to simultaneously move translationally and rotationally relative to the actuator support.
